

# POLYURETHANE ELASTOMER CENTRIFUGAL MOLDING MACHINE

## Application

Horizontal centrifugal molding machine can be used to produce polyurethane elastomer CPU sheet, screen scraper, wear-resistant scraper and copier scraper ; it ensures uniform film thickness and high degree of surface finish.

## Features

- \* The film thickness is controlled by the amount of pouring glue injected.
- \* Heating pipe evenly distributed, automatic temperature control, easy adjustment, hot air circulation more comprehensive and more stable.
- \* Film thickness uniformity, Shore A hardness uniform, smooth and smooth surface, film thickness 1 - 20 mm
- \* Frequency control, with a stop brake brakes, timing alarm, speed, deceleration overload automatic protection.
- \* Heating temperature 100~150 soil 5°C
