

POLYURETHANE ELASTOMER SHEET CUTTING MACHINE

Application

Mainly used for polyurethane elastomer (PU) sheet cutting.

Features

Used for cutting and slitting polyurethane elastomer (CPU) sheets to meet product process requirements.

- * Place the polyurethane elastomer (PU) sheet on a large rubber-lined cylinder that is locked with a bead.
- * Cutting is carried out by the cutter on the tool holder of the transverse guide rail.
- * The cutting width can be adjusted freely, and high-speed steel cutters with a relief angle of 5 - 10 degrees can be used.
- * When the material hardness is large, the clearance angle can be increased.
